

ScreenLine®

INTRODUCTION

AC Yule have teamed up with ScreenLine to supply sealed units with interstitial blinds. ScreenLine is a revolutionary system that allows blinds to be placed inside a sealed unit, and activated externally with no intrusion of the seal.

ScreenLine can be fitted in new buildings or fitted into existing frames - in any commercial application. There is a special ScreenLine system that has been specifically developed for the domestic sector - please ask for details.

BENEFITS

ScreenLine provides many enhancing features. As an integrated component of the sealed unit, the blind requires no cleaning and is protected from damage. This vastly reduces the cleaning and maintenance costs associated with other blinds. Cleaning of the glass is also faster and easier without the blind to hinder you.

ScreenLine also provides greatly enhanced sunshading features. ScreenLine can greatly enhance the u-value of a sealed unit. In addition, the method of metallisation of the fabric slats can further enhance these solar control properties, reducing heat loss in winter by up to 30%. Vertical sideguards prevent light entrance between the edge of the fabric and the window frame and ensure the blind does not get snagged or jammed.

DIMENSIONS

ScreenLine blinds can be fitted to any window accommodating a unit with an 18mm and upwards cavity.

PLEATED BLINDS

1200mm wide x 2500mm high for 18mm cavities.
1500mm wide x 2500mm high for 20mm cavities.

VENETIAN BLINDS

1500mm wide x 2500mm high for 20mm cavities.
2500mm wide x 3000mm high for 24/27mm cavities.

OPERATION

The exclusive magnetic design, which is patented worldwide, activates the blind system. A pair of magnets, one internal one external, control the movement of the blind. A cord-loop turns the external magnet and the blind is raised, lowered or tilted. Operation is also available by an external motor or by an internal electric motor contained within the railhead.

COLOURS

The blinds come in two different forms. The continuous fabric blinds come in 8 fashionable colours and each is available in 3 material types, transparent, semi-transparent and opaque.

The slatted blinds are available in 13 colours, dependent on system requirements. Sample swatches are available on request.
