

Introducing the ultimate sustainable PVCu window system from AC Yule

Ecologik is the latest addition to the AC Yule window range. It combines all the aesthetics and thermal efficiency of existing PVCu windows, with a core of recycled PVCu, which creates a sustainable product that meets the demands of today's consumers and building specifiers.

Post-consumer recycled PVCu components

All internal structural elements and PVCu Thermal inserts within the Ecologik profile system are manufactured entirely from post-consumer recycled PVCu. This means that we can meet the growing needs and consumer demand for more sustainable products, as well as regulatory demands for carbon reduction and sustainable sourcing set out in the Code for Sustainable Homes and BREEAM standards.

No compromise on looks or performance

Ecologik is a fully design-engineered system, which means the recycled content used is clearly defined within the core of the PVCu profile. All external, visible surfaces remain bright, white, virgin PVCu. Ecologik offers its high recycled content and a U-value of $0.8 \text{ W/m}^2\text{K}$ can be achieved dependant on glass make up used, without compromising on the established aesthetics or long-life performance of the existing window system.

The hassle-free way to go green

AC Yule makes going green hassle-free and risk-free for specifiers, house builders, local authorities and Housing Associations, since the physical properties and appearance of the system are exactly the same for standard PVCu systems. .

Why install Ecologik from AC Yule?

- Fully design-engineered system - concealed, internal post-consumer recycled components combined with virgin PVCu outer surfaces for unmatched aesthetics.
- Extruded finish with no foiling - for a bright, fresh finish, colour-matched with all other Eurocell building plastics.
- U-value of 0.8 W/m²K can be achieved dependant on glass make up used, to meet zero carbon or 'passive' house standards.
- Assists compliance with Code for Sustainable Homes and BREEAM standards.
